ABSTRACT

An apparatus for remote hand control of a computer device, the apparatus comprising: a hand tracker, configured to track movement of a hand of a user of the computer device, an image presenter, associated with the hand tracker, configured to present a first image representative of the hand and a second image to the user, and to move the first image in concert with the tracked movement, and a computer controller, associated with the image presenter and configured to control the computer device in accordance with an interaction between the first image and the second image, thereby allowing the user to control the computer device, by moving the hand for bringing the first image and the second image into the interaction.
